## **DETAILED ACTION**

### ***Response to Amendment***

1. Applicant's amendment filed on 12/13/2004 has been received and entered in the case. As to the prior art rejections to the claims. Applicant's amendment has overcome the rejections, as such; the prior art rejections to the claims made in the previous Office Action mailed on 6/07/2004 are now withdrawn. Therefore, the case is now found to be in allowance condition for the reasons as set for below.

## **REASON FOR ALLOWANCE**

2. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to disclose or fairly suggest an active electronic isolator (as shown on Fig. 6) between a source stage (200 in instant Fig. 2) and a load stage (220), as recited in claim 1, comprising at least one circuit path (N501, R502, V601) into which electrical noise is directed away from the source and the load stages, and specifically the limitation directed to configuring means (V601, V602) for configuring the path to always appear as an infinite impedance to the output signal from the source stage, in which insertion loss of the electronic isolator is dependent upon the direction of signal and noise transmission through the electronic isolator, wherein the insertion loss in one direction is greater than in the other direction.

Claim 13 is similarly allowed; note the above discussion with regard to claim 1.
